

## CHAIN TAGS

### The chain tag is an important part of the chain sling assembly.

In many respects it's the brain; it holds all the key information about the sling.

- Identification of the manufacturer (Name or Symbol or recognised mark).
- Identification of material or grade i.e.10.
- Nominal chain size and number of legs
- Working load limit (WLL)
- Serial number of the sling.
- The CE mark

### It's not just a pretty shape !

The shape of the tag directly reflects the grade of chain sling it is to be used on:

10 pointed star	Grade 10 Winner 200
Oval	Grade 10 Winner 400
8 pointed star	Grade 8
5 pointed star	Grade 50 stainless steel
Rectangle	Lashing

### Safety first ! Know your tag.

- No tag? Do not use
- Wrong tag? Do not use - Check sling certificate
- The WLL (Working Load Limit) is the maximum sling capacity
- Use the reduction load factors to determine the SWL
- Read and understand the chain sling load charts
- Read and understand the safe use instructions supplied
